CATEGORY / EVENT	Creative
TEAM	2 person / team
AGE	13-16

1.0 OBJECTIVE

This event aims to enhance students' creativity by applying scientific concepts and engineering knowledge in the real world. Participants need to identify areas where robotics may be put into practice, adding value towards the roles of robots in interplanetary missions, problem-solving, and human-robot collaboration in outer space.

2.0 THEME

"Cultural Heritage Service Robot".Robots that help people experience, understand and protect cultural heritage.

2.1 THEME CONCEPT

"Cultural Heritage Service Robot" refers to robots supporting human interaction, cultural understanding, and social responsibility.

This main theme has been established in consideration of the rich cultural heritage and historical background of Europe, including Austria. It has been planned to explore the roles that robotics and artificial intelligence technologies can play in enhancing human interaction, fostering cultural understanding, and contributing to the realization of social responsibility.

Through this theme, participating students are encouraged to develop their projects in the following directions:

- Service robots that support the preservation, interpretation, and experience of cultural heritage
- Robotic systems that interact with people and communicate cultural value
- Robots and AI applications that reflect social responsibility, including public interest, accessibility, and inclusiveness
- Other robots related to Cultural Heritage Service

The main theme aims to assess not only technical excellence but also the degree of understanding of and contribution to people, society, and culture.

3.0 VENUE	
3.1 Preliminary round	: Online
3.2 Final round	: MRSM Bentong

4.0 GAME METHOD

4.1 All team must submit a Design Framework of their project.

4.2 The 20 best projects from each subcategory will be shortlisted and will qualify to the final round.

5.0 IMPORTANT DATES	
5.1 Preliminary round	: 8-11 June 2026
5.2 Official announcement for the final round	
5.3 Final round	: 19 June 2026
	: 4-5 July 2026

6.0 RULES AND REGULATIONS

6.1 Preliminary Round

i. The Creative Category will feature two categories; Creative Technic and Creative Idea. Each college **must** participate in **both** categories. The same team is not allowed to participate in both categories. Descriptions of the sub-categories is as follow:
Creative Technic: Assessment focused on participants' **technical understanding** and **demonstration.**
Creative Idea: Assessment focused on **creativity** of the proposed idea.

ii. On the day of the preliminary round, a subtheme related to the year's theme will be revealed. Participants will be given 3 hours to plan a design of a robot based on the subtheme that was announced. In this given time, they are required to document their ideas and technical details of their robot in the Design Framework sheet given (**refer to Appendix 1**).

iii. The Design Framework sheet can be filled digitally or by hand.

iv. The Design Framework sheet must be submitted as a single PDF file within the 3-hour period using the online submission form given by the organiser.

v. The Design Framework should contain the following:
- The purpose of the project
- Explanation on the functions of the robot, including its use of Internet of Things (IoT) or / and Artificial Intelligence (AI).
- Sketch of the design of the robot. The sketch can be hand-drawn or presented in digital form using any suitable software (TinkerCAD, Canva, etc.) attached into the Design Framework.

6.2 Final Round

Robotic Design Challenge (Day 1)

i. On the day of the competition, a subtopic related to the year's theme will be revealed. Different subtopics will be given for each of the categories. The participants must develop a Design Framework and build their robot based on the subtheme.

ii. Participants will be given 2 hours to plan a design of a robot based on the subtopic that was announced. In this phase, they are required to document their ideas and technical details of their robot in the Design Framework given. The team is encouraged to bring in any suitable type of stationaries for the purpose of drafting and sketching.

iii. Production plan must be submitted at the end of the 2-hour period. During the Production Plan Phase, teams are **not allowed** to construct their robot.

Construction Phase (Day 1)

i. At the initial phase of construction, all loose parts must be dismantled. The team will be given 5 hours to complete the robot construction in the presentation area without assistance from outside parties. Pre-assembled robots are **not allowed**. However, a pre-built processor module for robot control is **allowed**.

ii. The robot must have IoT and/or AI functionality and interact with other devices (i.e. computer or smartphone) via Bluetooth or Wi-Fi to collect data**.** The robot must operate autonomously without any external control.

iii. Each team is allowed to use any microcontroller available in the market as the microcontroller of their robot. Examples of IoT devices to attach to the robot include ESP32, ESP8266, Arduino with Wi-Fi module, Raspberry Pi, NODEMCU8266, etc.

iv. The built robot must be able to function as intended and perform the designated tasks effectively according to the team's production plan.

v. Each team must bring their own materials and tools for the construction of the robot. Only the use of battery-powered electric tools is allowed.

vi. At the end of the construction phase, the team's robot must not be taken out of the presentation area.

vii. Participants who exceed the time limit will receive point deductions according to the table below. Participants who do not submit their work within 30 minutes of the end of the Construction Phase will be disqualified.

Time (min)	5	10	15	20	25	30 or more
Point deduction	-1	-2	-3	-4	-5	Disqualification

Presentation Phase (Day 2)

i. In the Presentation Phase, except for batteries, robot parts are not allowed to be brought into the room. Robot construction is not allowed during the Presentation Phase.

ii. Each team must present their project to the judges. They are given 2-5 minutes for the presentation, inclusive of questions and answers (Q&A) time. The presentation must be done in English. The Q&A session will also be conducted in English.

iii. In the presentation, the robot must demonstrate its functions. Teams are allowed to show their project video to assist with the presentation.

iv. The presentation of the project must be done at the allocated table. However, the demonstration of the robot's functionality may be done in other suitable locations, subject to the judges' discretion.

v. Each team will be provided with a table approximately 180cm long and 60cm wide (subject to change). Teams may freely utilize the surrounding space as long as they do not disturb other teams. The exhibit of the project, including the booth decorations, must not exceed the table size.

vi. For the purpose of the presentation, the use of slides and bunting is allowed, but it is **optional**. Should the team decide to use them, the bunting should not exceed 2 feet wide and 5 feet high. The team will also need to bring their own bunting stand.

vii. The use of dangerous and polluting materials and operations is not allowed.

7.0 JUDGEMENT

7.1 In the Creative Technic category, the judges will evaluate based on the judging criteria below and will compare the total scores to determine the ranking. Refer to the Evaluation Rubric for a detailed breakdown.

- Creativity
- Technical Understanding
- Presentation

7.2 In the Creative Idea category, the judges will evaluate based on the judging criteria below and will compare the total scores to determine the ranking. Refer to the Evaluation Rubric for a detailed breakdown.

- Design
- Technical
- Presentation

7.3 Tiebreakers

In the event of a tie, prioritization is based on the following order:

i. Priority 1: Higher Technical Proficiency
ii. Priority 2: Higher Creativity
iii. Priority 3: Higher Completeness
iv. Priority 4: The conduct and confidence displayed by the team during the presentation, reflecting their enthusiasm and professionalism for the competition.
v. Priority 5: Higher levels of participation and engagement within the team

8.0 OTHER

8.1 During the course of the competition, only participating teams and competition staff are allowed to be on-site.

8.2 Should the team face issues during the Construction Phase, the team should approach from the staff on-site. Teams or individuals who receive assistance from external parties (parents, coaches, mentors, other participants, etc.) will be **disqualified**. Additionally, if a project is deemed not to be the participant's own work, it will be excluded from awards.

8.2 External parties must not disrupt the competition or interfere with the staff, the judges or the competition as a whole. Repeated offenses by the same party will result in the team being **disqualified**.

8.3 Participants are prohibited from using devices to communicate or devices with Internet access throughout the course of the competition.

8.4 Participants must demonstrate sportsmanship when interacting with other teams. Harassment, unsportsmanlike conduct, or intentional actions that harm other teams are strictly prohibited. Participants found violating these rules may face penalties or disqualification, depending on the severity of the offense.

8.4 Participants must maintain a clean environment. Failure to keep their designated area in an appropriate condition may result in point deductions.

Should you require any additional information, please refer to the Person-In-Charge (PIC) for category:

- Nur 'Atikah Binti Ismail (017-3700680)(n.atikah@mara.gov.my)
- Dzafarin Imran Bin Mohd Fadil (011 26658813) (d.imran@mara.gov.my)
